

## SQL Developer Job Description

The SQL Developer will be responsible for developing applications and integrations using the Microsoft SQL Server platform. This will include reports, vendor exports, data warehousing tasks and other data related tasks. This position requires excellent communication, technical and project management skills.

The SQL Developer / Database Analyst responsibilities:

- Maintain and enhance the existing data warehouse, exports, and reports
- Manage Electronic Data Interfaces (EDI) with insurance vendors
- Develop vendor and client exports that meet provided specifications
- Perform quality checks on reports and exports to ensure exceptional quality
- Monitor job and transfer queues to ensure they are functioning as expected
- Provide business users the data required for metrics and analysis
- Develop new SSIS/SSRS packages to meet business needs
- Migrate existing Access reports to SSIS/SSRS
- Create and maintain documentation for all projects

Technical skills and experience required for this position will include:

- Microsoft SQL Server 2005 server side development including (SSIS, SSRS, SSMS)
- T-SQL (Transact SQL) Stored Procedures and Triggers
- The ideal candidate should possess some database administrative experience
- The ideal SQL Server side developer should possess payroll or accounting experience
- The ideal candidate should possess some experience working with Access applications and strong Excel skills

Skills considered a plus for this position:

- Experience with HIPAA 834 format or other EDI formats
- Experience with Ultimate Software or HRPyramid
- .NET development experience
- Knowledge of the Unidata data structure
